M006 Metaprogramming, Metatron, Metausers: From Subjects of Catholic Kingdoms to Owners of Metatronic World

Heliocentrism, the theory that the earth revolves around the sun, has initiated revolutions that transformed the role of individuals from being a subject (literally "sheep" and "herd") of Catholic Kingdoms to citizens of modern nation states. In a previous article, we argued that metaprogramming could be like heliocentrism, something that may initiate a new scientific revolution.

We believe the metaprogramming revolution would lead to the following major achievements:

1. Science and Education: Metaprogramming will become the fundamental syllabus in programming and mathematics, elevating the intellect of the next generation of students to the next level, much like how programmers in 2021 compare to the ignoratis prior to the invention of the personal computer in the 1970s.
2. Metatron: a global computer network built using metaprogramming.
3. Governance: Metatron introduces decentralized cryptography features to ensure accountability and transparency in public institutions of governments around the world.

We call the future global computer network Metatron, derived from the Greek words _μετὰ θρόνος_, i.e. a system built using metaprogramming.

The users of Metatron would be known as Metausers.

The term Metatron, according to Wikipedia, is not in common use today:

- https://en.wikipedia.org/wiki/Metatron
- _Metatron seems to be made up of two Greek words for after and throne, μετὰ θρόνος (meta thronos), taken together as "one who serves behind the throne" or "one who occupies the throne next to the throne of glory".[61] The two words do not appear separately in any text known to Gershom Scholem, who therefore dismisses the idea[62] with the words "this widely repeated etymology...has no merit."[63]_

As such, we believe the word Metatron can be adapted in the future according to our definition if it indeed becomes the next generation global computer network.

The Barrier of Entry into Metaprogramming

Readers may find the discussion above a fantasy at first. However, you will be able to verify these arguments after you understand how to implement a Forth-like stack machine interpreter in a host programming of your choice. Students who learn a programming language for the first time at university may accomplish that within one semester. A programmer with more than one year of experience may accomplish that in a couple of hours.

The 3 breakthroughs that we have achieved and developed as an MVC framework called Duniix are:

1. Phoscript: a metaprogramming script derived from the Forth programming language;
2. DUAS: Decentralized User Authentication Scheme;
3. FSGDB: Filesystem Graph Database.

The code base of Duniix is only less than 10 MB and can be verified only by users to check the claims we made above.

Social Media Noises & Manipulations

Before we even begin to discuss the words contained in the title "Metaprogramming, Metatron, Metausers", we should perhaps address readers' concerns, who would most likely keep quiet while disagreeing, due to the omnipotent political correctness introduced since the end of World War II.

Under these circumstances, perhaps the best way to excite or even incite readers to engage in deeper discussions is fiction, where the believers of political correctness a.k.a. "MAGAF fans" may be tempted to express their opinions. By MAGAF, we refer to "Microsoft Apple Google Amazon Facebook", the establishments of the tech sector.

A great example would be Orwell's 1984, published in 1949.

Has the world become more difficult to publish a work like 1984?

Perhaps it has become easier for any writer to publish in 2021. However, social media in 2021 have too much noises and manipulations.

Trinity of Metaprogramming, Metatron & Metausers

In the new era of social media, we must continuously publish an article even if it is not finished, as we can incorporate readers' feedback on the next day.

Just one last section on the concept of "Trinity" before we end this article.

The title of this article begins with the Trinity of Metaprogramming, Metatron, and Metausers.

Similarly, in Yoga, there are Tantra, Mantra and Yantra.

In Taoism, there is:

- 道生一 一生二 二生三 三生万物

I guess we might conclude that, if we stumble across (discover) a new system, which can be used to construct new things, then the first instance will lead to the second, the third and so on.

So Trinity is just a snapshot of the initial three instances of the system. But it makes good material for science fiction, as we can excite (incite) politically correct religious people, and gain more readership.
